# Office of Law Enforcement Professional Standards Traffic Stop Dashboard: Data Export

## Data Export Notes and Definitions

Individuals navigating the State Police Traffic Stop dashboard may download the data supporting the dashboard in exportable files. Accordingly, users may navigate the data on the dashboard or export files for their own examination.

The data available in the export are based on State Police motor vehicle stop reports that have been closed for stops occurring from January 1, 2009 to December 31, 2020.

To maintain the privacy of the subjects in these incidents, subject names and address locations are not currently available.

## Data Formats

The data are available in annual files in the following downloadable formats:

- Comma de-limited (.csv)

## Data Structure

The data are structured so that each row represents a unique New Jersey State Police motor vehicle stop. Note that only incidents labeled a motor vehicle stop appear in the data. Other events, such as a motor vehicle accident or motorist aid, do not appear in the data, unless those events are re-classified in State Police's databases as a motor vehicle stop. Each column represents a specific field of information about the motor vehicle stop.

## Data Fields and Definitions

The following fields are included in the data export. For a more detailed history of the statutory requirements regarding these data, visit the Office of Law Enforcement Professional Standards (OLEPS) [website](#).

Field Name	Definition	Values
